Population ecologists study how births and deaths affect the dynamics of populations and communities, while ecosystem ecologists study how species control the flux of energy and materials through food webs and ecosystems. Although all these processes occur simultaneously in nature, the mathematical frameworks bridging the two disciplines have developed independently. Consequently, this independent development of theory has impeded the cross-fertilization of population and ecosystem ecology. Using recent developments from dynamical systems theory, this advanced undergraduate/graduate level textbook shows how to bridge the two disciplines seamlessly. The book shows how bifurcations between the solutions of models can help understand regime shifts in natural populations and ecosystems once thresholds in rates of births, deaths, consumption, competition, nutrient inputs, and decay are crossed.

Mathematical Ecology is essential reading for students of ecology who have had a first course in calculus and linear algebra or students in mathematics wishing to learn how dynamical systems theory can be applied to ecological problems.

From reader reviews:

Wanda Matthews:

Book is to be different for every grade. Book for children till adult are different content. As it is known to us that book is very important normally. The book Mathematical Ecology of Populations and Ecosystems ended up being making you to know about other know-how and of course you can take more information. It doesn't matter what advantages for you. The reserve Mathematical Ecology of Populations and Ecosystems is not only giving you more new information but also for being your friend when you experience bored. You can spend your personal spend time to read your book. Try to make relationship while using book Mathematical Ecology of Populations and Ecosystems. You never sense lose out for everything when you read some books.

Wanda Stamper:

Now a day individuals who Living in the era wherever everything reachable by match the internet and the resources within it can be true or not call for people to be aware of each info they get. How many people to be smart in getting any information nowadays? Of course the reply is reading a book. Reading a book can help men and women out of this uncertainty Information especially this Mathematical Ecology of Populations and Ecosystems book since this book offers you rich info and knowledge. Of course the information in this book hundred per-cent guarantees there is no doubt in it you may already know.

Aurelio Ashley:

Reading can called brain hangout, why? Because while you are reading a book mainly book entitled Mathematical Ecology of Populations and Ecosystems your thoughts will drift away trough every dimension, wandering in every single aspect that maybe mysterious for but surely can be your mind friends. Imaging every word written in a book then become one web form conclusion and explanation this maybe you never get before. The Mathematical Ecology of Populations and Ecosystems giving you yet another experience more than blown away your mind but also giving you useful info for your better life within this era. So now let us explain to you the relaxing pattern here is your body and mind are going to be pleased when you are finished studying it, like winning a sport. Do you want to try this extraordinary investing spare time activity?

Walter Knight:

As we know that book is vital thing to add our knowledge for everything. By a publication we can know everything we wish. A book is a list of written, printed, illustrated or maybe blank sheet. Every year ended up being exactly added. This guide Mathematical Ecology of Populations and Ecosystems was filled with regards to science. Spend your free time to add your knowledge about your science competence. Some people has diverse feel when they reading any book. If you know how big advantage of a book, you can experience enjoy to read a book. In the modern era like at this point, many ways to get book you wanted.
