Stoichiometry and Process Calculations K.V. Lakshmikutty

This book is organized to help the students to develop a systematic approach to making stoichiometric calculations. The Chapters in the book deal with thermodynamic concepts such as the P-V-T behaviour of fluids, the phase behaviour of pure materials and solutions. It also explains the concepts such as density, heat capacity, latent heat, heat of reaction, calorific values, vapour pressure, humidity, etc. This book is intended as a textbook for undergraduate courses in chemical engineering and related disciplines such as biotechnology, polymer technology, petrochemical engineering, electrochemical engineering, environmental engineering, safety engineering and industrial chemistry.
