Economic Incentives for Stormwater Control (Ecological Economics)

Economic Incentives for Stormwater Control (Ecological Economics)

Dealing with stormwater runoff in urban areas is a problem that is getting bigger and more expensive. As we cover porous surfaces with impervious structures—commercial buildings, parking lots, roads, and houses—finding places for rainwater and snowmelt to soak in becomes harder. Many landscapers, architects, planners, and others have proposed that the use of "green" localized management practices, such as rain gardens and bio-swales, may function as well as traditional "gray" pipes and basins at reducing the effects of stormwater runoff, and do so in a way that is more attractive in the landscape—and possibly also less expensive. To make stormwater management practices work, however, communities need to know the real costs and policy makers need to give people incentives to adopt the best practices.

Economic Incentives for Stormwater Control addresses the true costs and benefits of stormwater management practices (SMPs) and examines the incentives that can be used to encourage their adoption. Highlighting the economic aspects, this practical book offers case studies of the application of various stormwater runoff control policies. It also presents the theory behind the different mechanisms used and illustrates successes and potential obstacles to implementation.

The book covers:

- Efficient use of "green" SMPs
- Low-impact development (LID) style new construction
- Green infrastructure
- Property prices and incentive mechanisms to encourage homeowners to retain stormwater on their property
- Legal, economic, and hydrological issues associated with various incentive mechanisms

- In-lieu fees and cap-and-trade incentives

Primarily concerned with the sociodemographic and economic aspects of people's participation in stormwater runoff control, this accessible volume explores opportunities available to municipalities, stormwater managers, and stakeholder groups to enact sustainable, effective stormwater management practices.
