Architectural Glass to Resist Seismic and Extreme Climatic Events (Woodhead Publishing Series in Civil and Structural Engineering)

Architectural Glass to Resist Seismic and Extreme Climatic Events (Woodhead Publishing Series in Civil and Structural Engineering)

Glass is a popular cladding material for modern buildings. The trend for steel-framed, glass-clad buildings instead of those using traditional materials such as brick and concrete has inherent problems. These include, for example, the performance of architectural glass in extreme climatic events such as windstorms and heavy snow loads and also during earthquakes. This book reviews the state-of-the-art in glass and glazing technology to resist failure due to these natural events.

Building code seismic requirements for architectural glass in the United States are considered first of all, followed by a chapter on glazing and curtain wall systems to resist earthquakes. The next two chapters discuss snow loads on building envelopes and glazing systems, and types and design of glazing systems to resist snow loads. Wind pressures and the impact of wind-borne debris are then considered in the next group of chapters which also review special types of glazing systems to resist windstorms. A final chapter reviews test methods for the performance of glazing systems during earthquakes and extreme climatic events.

With its distinguished editor and team of contributors, Architectural glass to resist seismic and extreme climatic events is an essential resource for architects, structural, civil and architectural engineers, researchers and those involved in designing and specifying building glazing and cladding materials in areas where severe windstorms, snow and earthquakes are a threat.

- Considers the state of the art in glass and glazing technology to resist failure due to extreme climatic events
- Reviews specific building techniques and test methods to enhance glazing performance during snow storms, wind storms and earthquakes

From reader reviews:

Ryan Calhoun:

A lot of people always spent their particular free time to vacation or even go to the outside with them household or their friend. Were you aware? Many a lot of people spent many people free time just watching TV, or even playing video games all day long. In order to try to find a new activity that's look different you can read any book. It is really fun in your case. If you enjoy the book that you just read you can spent 24 hours a day to reading a publication. The book Architectural Glass to Resist Seismic and Extreme Climatic Events (Woodhead Publishing Series in Civil and Structural Engineering) it is rather good to read. There are a lot of those who recommended this book. These were enjoying reading this book. If you did not have enough space to bring this book you can buy the e-book. You can m0ore easily to read this book from your smart phone. The price is not to fund but this book offers high quality.

April Young:

In this period globalization it is important to someone to obtain information. The information will make someone to understand the condition of the world. The condition of the world makes the information quicker to share. You can find a lot of referrals to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher that will print many kinds of book. The actual book that recommended to your account is Architectural Glass to Resist Seismic and Extreme Climatic Events (Woodhead Publishing Series in Civil and Structural Engineering) this e-book consist a lot of the information in the condition of this world now. This book was represented just how can the world has grown up. The terminology styles that writer value to explain it is easy to understand. The particular writer made some exploration when he makes this book. That's why this book suited all of you.

Phyllis Ramirez:

Many people spending their time frame by playing outside having friends, fun activity along with family or just watching TV 24 hours a day. You can have new activity to pay your whole day by reading through a book. Ugh, you think reading a book can actually hard because you have to accept the book everywhere? It ok you can have the e-book, getting everywhere you want in your Smart phone. Like Architectural Glass to Resist Seismic and Extreme Climatic Events (Woodhead Publishing Series in Civil and Structural Engineering) which is getting the e-book version. So , try out this book? Let's notice.

Jack Nguyen:

As we know that book is very important thing to add our know-how for everything. By a reserve we can know everything we wish. A book is a list of written, printed, illustrated or maybe blank sheet. Every year ended up being exactly added. This reserve Architectural Glass to Resist Seismic and Extreme Climatic Events (Woodhead Publishing Series in Civil and Structural Engineering) was filled in relation to science. Spend your free time to add your knowledge about your technology competence. Some people has different

feel when they reading a new book. If you know how big advantage of a book, you can really feel enjoy to read a book. In the modern era like now, many ways to get book that you just wanted.
