Antibody Fc: Chapter 14. No Mechanism is an Island: Interactions Among Monoclonal Antibody Mechanisms of Action George J. Weiner

Monoclonal antibodies (mAbs), including rituximab, are now a mainstay in the therapy of cancer. Despite their undeniable therapeutic value, there is much we do not fully understand about the mechanisms of action responsible for their anti-tumor effects. These mechanisms are often studied in isolation. In this chapter, we will review the mechanisms of action of anti-cancer mAbs and discuss how they interact. The focus of this discussion will be on rituximab, but similar conclusions can be reached with other mAbs.
